CULTURAL HINTS FOR BROMELIAD GROWERS

AECHMEA: Each species in the genus should be considered separately since the habitat covers nearly every geographic area where bromeliads are found. Aechmeas of Brazil, Bolivia and Chile are more hardy than those from Central America, the Caribbean & Amazonian South America. Some require feeding, some are hurt by fertilization. Nearly all do well mounted provided they are started young. Remember, mounted plants require care. Aechmea sizes range from very small to very large. Those which will ultimately be large should be weighted at potting time with rocks in the pot. After blooming, many Aechmeas produce colorful, attractive seeds, all of which are edible.

BILBERGIA: WITH FEW EXCEPTIONS THIS GENUS SHOULD BE PROTECTED FROM FREEZING. PLANTS SHOULD BE UNDERPOTTED & FED SPARINGLY SINCE OVERFEEDING PRODUCES LUSH, GREEN GROWTH AND IT MAY TAKE 3 GENERATIONS OF PUPS BEFORE COLOR IS RESTORED. THOSE FROM SUBGENUS HELICODEA ARE MOST TENDER. SUBGENUS BILLBERGIA PLANTS NEARLY ALL BLOOM DURING WINTER MONTHS WHEN THEIR BLOOMS, THOUGH FLEETING, ARE MOST WELCOME.

ANDROLEPIS, ANANAS, ARAEOCOCCUS, ORTHOPHYTUM, NEOPHYTUM:

THESE HAVE ALL BEEN LUMPED TOGETHER SINCE THEY SEEM TO THRIVE ON SIMILAR TREATMENT. ANDROLEPIS & ANANAS (PINEAPPLE) ARE LARGE PLANTS. THE OTHERS ARE MORE MANAGEABLE IN SIZE. ALL REQUIRE STRONG LIGHT, RICH SOIL, GENEROUS POT SIZE, REGULAR FEEDING AND PLENTY OF MOISTURE. MOST PREFER WARM WEATHER AND GROWTH IS SLOWED DURING WINTER MONTHS.

QUESNELIA, HOHENBERGIA, PORTEA, STREPTOCALYX: I CONTINUE TO LIST STREPTOCALYX AS A SEPARATE GENUS. THERE ARE SOME BIG, MEAN PLANTS IN THESE FOUR GENERA. QUESNELIA IS THE MOST COLD HARDY, SURVIVING OUTDOORS UNDER TREES IN CENTRAL FLORIDA. PORTEA IS THE NEXT HARDEST, WHILE HOHENBERGIA & STREPTOCALYX ARE ALWAYS VERY TENDER. STRONG LIGHT & CESSATION OF FEEDING WHEN THE PLANTS ARE MATURE PRODUCES BEST FOLIAGE COLOR & PROMOTES BLOOMING. BE SELECTIVE GROWING HOHENBERGIA. MANY HAVE NOTHING BUT SIZE TO RECOMMEND THEM, WITH GREEN FOLIAGE AND COLORLESS BLOOMS. WE LIST ONLY THE ATTRACTIVE FORMS. STREPTOCALYX HAVE VERY SPINY LEAVES, BUT EXTREMELY BEAUTIFUL BLOOMS. GROW WARM, ON THE DRY SIDE AND FURNISH LOTS OF LIGHT.

CANISTRUM, CRYPTANTHUS, CANMEA, NIDULARIUM: AGAIN, THESE TAKE SIMILAR TREATMENT. CRYPTANTHUS ARE TERRESTRIAL, BUT THE OTHER 3 CAN BE MOUNTED. ALL LIKE RICH SOIL, PLENTY OF MOISTURE, AND SHOULD BE FED REGULARLY. FAIRLY LOW LIGHT IS IMPORTANT. CRYPTS & CANMEA DO BEST IN 60% SHADE, THE REST TOLERATE EVEN LOWER LEVELS. NIDULARIUMS TOLERATE COLD, WET CONDITIONS AND ARE GREATLY UNDER-RATED. THEY ARE GREAT POOLSIDE SPECIMENS OR PLANTED UNDER SHRUBBERY IN THE YARD. THEY RESEMBLE NEOREGELIAS, SO ARE OFTEN GROWN THE SAME AND THE RESULT IS DISAPPOINTING. DON'T BE ALARMED IF THEY DROP LOWER LEAVES. THAT IS NORMAL FOR THE GENUS. TREAT CANISTRUM AS NIDULARIUM.

NEOREGELIA: OFFSETS OF NEOREGELIA FROM THE SAME PLANT, GROWN BY TWO DIFFERENT PEOPLE IN DIFFERENT AREAS, CAN MATURE WITH LITTLE RESEMBLANCE TO ONE ANOTHER. THE PLANTS ARE VERY SENSITIVE TO LIGHT, FERTILIZER AND POT SIZE AND THESE MAKE A WORLD OF DIFFERENCE IN THE FINISHED PLANT. MOST DO BEST WHEN UNDERPOTTED AND UNDERFED, GROWN ON THE DRY SIDE, AND, HERE IN FLORIDA, SUBJECTED TO STRONG LIGHT. 50% SHADE IS ALWAYS SAFE. NEOS DO WELL OUTDOORS IN SUMMER, BUT PICK UP LEAVES & DEBRIS WHICH MAKES THEM UNSIGHTLY. WITH GOOD GROWING THEY GIVE MORE SATISFACTION WITH LESS WORK THAN MOST BROMELIADS. THE MORE

OFFSETS TAKEN FROM A NEO, THE MORE ADDITIONAL ONES WILL FORM. SET OFFSETS UPRIGHT IN AN EMPTY POT FOR 10 DAYS TO HARDEN OFF BEFORE POTTING, BUT KEEP WATER IN THE CUP. OFFSETS SHOULD NOT BE TAKEN DURING SHORT CALENDAR DAYS.

THE PITCAIRNIOIDEAE: THIS SUBFAMILY WAS THE FORERUNNER OF ALL BROMELIADS, EVOLVING IN THE DEEP PAST FROM THE GRASS FAMILY. ALL (DYCKIA, PEPINIA, PITCAIRNIA, DEUTEROCOCHNIA, FOSTERELLA) ARE TERRESTRIALS REQUIRING COPIOUS AMOUNTS OF WATER & FOOD WHEN GROWN AS POT SPECIMENS. EITHER WATER DAILY OR GROW WTANDING IN WATER. DYCKIA IS FROM BRAZIL & COLD HARDY. THE HECHTIAS ARE NATIVE FROM TEXAS THRU CENTRAL AMERICA AND ARE EXTREMELY TENDER. PITCAIRNIA & PEPINIA ARE BECOMING MORE POPULAR THOUGH THE FOLIAGE IS OFTEN GRASSY AND SLOPPY. THE BLOOMS ARE SPECTACULAR RED, YELLOW, ORANGE. PITCAIRNIA HABITAT IS USUALLY DAMP CREEK BANKS AND SHADY LOCATIONS. THEY SEEM TO ENJOY A DORMANT, DRY RECESS FOR A PERIOD DURING THE WINTER AND THIS SEEMS TO FORCE BLOOMING WHEN WATERING IS RESUMED. DYCKIAS & HECHTIAS SHOULD BE GROWN IN STRONG LIGHT, AND SINCE THEY HAVE HUGE ROOT SYSTEMS, NEED TO BE OVERPOTTED.

TILLANDSIA: COLLECTORS VISUALIZE TILLANDSIAS AS DRY GROWING, SUN-LOVING EPIPHYTES. THAT IS THE EXCEPTION RATHER THAN THE RULE. THOSE WITH THE HEAVIEST COAT OF PELTATE (FUZZY) SCALES WILL SURVIVE DRY CONDITIONS, BUT THIS IS THEIR MECHANISM FOR EXTRACTING MOISTURE FROM THE AIR. ALL TILLANDSIAS NEED MOISTURE. IN THE WILD, THEY GROW ON TREE LIMBS WHERE THEY ARE PROTECTED BY THE FOLIAGE, NOURISHED BY BIRD MANURE AND LEAF MOLD. DO NOT TREAT THEM ALL THE SAME. RESEARCH THE HABITAT AND TREAT ACCORDINGLY. FERTILIZE IF GREENHOUSE GROWN. TREAT GENUS RACINEAE BASICALLY THE SAME AS TILLANDSIA.

GUZMANIA: LOW LIGHT, WARM AIR, AIR CIRCULATION, PLENTY OF PLANT FOOD AND MOIST POT SPACE. GUZMANIAS ARE TRULY TROPICAL PLANTS AND FRUSTRATING FOR MANY NEW GROWERS. NEGLECT OF ANY SORT IS INTOLERABLE. GUZMANIA HYBRIDS ARE EASIER TO GROW THAN THE SPECIES AND USUALLY MORE SPECTACULAR. WATER FROM THE BASE WHEN BLOOMS APPEAR TO AVOID THE "CEMENTING" CURSE. GROW OUTDOORS AT YOUR OWN RISK.

VRIESEA, ALCANTAREA: THESE ARE THE ARISTOCRATS OF THE BROMELIAD FAMILY. SMALL &/OR HUGE, WITH PLAIN GREEN OR FANCY, PATTERNED FOLIAGE. THE PLANTS LOOK FRAGILE, BUT ARE PROBABLY THE HARDEST OF ALL BROMELIADS. THEY HAVE SHALLOW ROOT SYSTEMS AND SHOULD, THEREFORE, BE FED THRU THE FOLIAGE. DRY CONDITIONS ARE TOLERATED BETTER THAN WET, BUT SURROUNDING AIR SHOULD BE MOIST, COOL AND MOVING. SOME LIKE STRONG LIGHT, BUT THE GENERAL RULE IS 60-65% SHADE. TRY GROWING SMALL TO MEDIUM SIZE VRIESEAS IN CLUMPS. MOST BLOOM IN LATE WINTER OR EARLY SPRING. LOW ALTITUDE GROWERS SHOULD AVOID HIGH ALTITUDE SPECIES.

CAROL JOHNSON
